

# Data-driven decision making for labour market policy

PI: Michael Lechner, Presenter: Federica Mascolo

## Current Stage of the project

- Data preparation completed for 1<sup>st</sup> project.
- Applications begin:
  - Estimate heterogeneous effects of ALMP using Causal Machine Learning
  - Next step: Investigate policy allocation schemes based on ‘individualized’ effects

## Implication of expected findings for Decision Makers

- They will obtain a better understanding of which policies works for different sub-groups of the population.
- Determine a rule that can improve allocation of individuals to programs that suit them the most.

## What is my message to stakeholders in politics and the practice?

- Enhance accessibility to data, such as providing comprehensive codebooks
- Ensure harmonization of the same information across various datasets.
